

Streamline CECL and IFRS 9 Compliance Efforts

Is your financial institution (FI) wasting precious time and resources mapping out data flows manually to prove regulatory compliance?

MANTA's automated data lineage solution eliminates this time-consuming, error-prone approach to auditing. The result? Proving risk model compliance with financial regulations like the **Current Expected Credit Losses (CECL)** standard and the **International Financial Reporting Standard (IFRS) 9** becomes that much simpler.

How We Help

Improved Auditing Process

With automated data lineage, you can generate a map of data flows automatically to prove compliance to auditors.

Proactive Risk Management

With total visibility into your data environment, you gain the competitive edge of not having to fear the unintended consequences of risk model and system updates.

Well-defined Change Controls

With a data lineage map, you have physical proof that your data is not being adjusted or altered at will and that you have strict change controls in place.

The MANTA Difference: Key Features

Data Flows Map

Generate a data flow map automatically to prove compliance to auditors.

Historical Lineage

Gain visibility into how your risk model has changed over time.

Data Catalog Integration

Integrate MANTA into the go-to data catalog you already use during auditing.
